PROJECTS

Centralized College Database

A record-keeping project. The database contains general student information (such as name, address, contact information, admission year, courses, etc.), attendance file, marks or result file, fee file, scholarship file, etc. An automated student database streamlines the university administration process to a considerable degree.

Health Center Management System

Main objective of the project is to build a platform for executing health center processes online. The module is designed to efficiently manages activities of the health center related to the pathology and radiology department. It is an user-friendly solution to various daily needs of the Health Center staff admin and the patients of the Health Center staff.

Online Plant Nursery

E-Commerce Website for Online Nursery Store Plants. Online Nursery Store overcomes lots of challenges when compared to an offline store. A separate website for plants helps customers to view various kinds of products. Is An E-Commerce Website is to provide features to customers like view descriptions, can comment on customization ideas, and can follow planting tips that promote gardening. The website recommends customers with the most purchased products, highest-rated products, and recently added products. After the order is placed, an order confirmation report can be viewed by the client for review
